

Practice quiz on Types of Functions

PUNTOS TOTALES DE 6

1. Suppose that $A = \{1, 2, 10\}$ and $B = \{4, 8, 40\}$. Which of the following formulae do **not** define a function $f : A \rightarrow B$?

1 / 1 puntos

- ☐ $f(a) = 4a$, for each $a \in A$
- ☐ $f(1) = 4, f(2) = 4$, and $f(10) = 4$.
- ☒ $f(1) = 5, f(2) = 8$, and $f(10) = 40$.
- ☐ $f(1) = 4, f(2) = 40$, and $f(10) = 8$.

✓ **Correcto**

A function $f : A \rightarrow B$ is a rule which assigns an element $f(a) \in B$ to each $a \in A$. In this case, unfortunately, $f(1) = 5 \notin B$.

2. Suppose that A contains every person in the VBS study (see the second video in the course if you're confused here!). Suppose that $Y = \{+, -\}$ and $Z = \{H, S\}$

1 / 1 puntos

Suppose that $T : A \rightarrow Y$ is the function which gives $T(a) = +$ if person a tests positive and $T(a) = -$ if they test negative.

Suppose that $D : A \rightarrow Z$ is the function which gives $D(a) = H$ if person a does not actually have VBS and $D(a) = S$ if the person actually has VBS.

Which of the following must be true of person a if we have a false positive?

- ☐ $T(a) = +$ and $D(a) = S$
- ☐ $T(a) = -$ and $D(a) = S$
- ☐ $T(a) = -$ and $D(a) = H$
- ☒ $T(a) = +$ and $D(a) = H$

✓ **Correcto**

Recall that a false positive is a positive test result (so $T(a) = +$) which is misleading because the person actually does not have the disease ($D(a) = H$)

3. Consider the function $g : \mathbb{R} \rightarrow \mathbb{R}$ defined by $g(x) = x^2 - 1$. Which of the following points are **not** on the graph of g ?

1 / 1 puntos

- ☐ $(1, 0)$
- ☒ $(2, -1)$
- ☐ $(0, -1)$
- ☐ $(-1, 0)$

✓ **Correcto**

Recall that the graph of g consists of all points (x, y) such that $y = g(x)$. Here $g(2) = 3 \neq -1$, so the point $(2, -1)$ is *not* on the graph of g .

4. Let the point $A = (2, 4)$. Which of the following graphs does *not* contain the point A ?

1 / 1 puntos

- ☐ The graph of $s(x) = x^2$
- ☒ The graph of $h(x) = x - 1$
- ☐ The graph of $g(x) = x + 2$
- ☐ The graph of $f(x) = 2x$

✓ **Correcto**

The graph of h consists of all points (x, y) such that $y = h(x)$. Here $h(2) = 1 \neq 4$, so the point $(2, 4)$ is *not* on the graph of h .

5. Suppose that $h(x) = -3x + 4$. Which of the following statements is true?

1 / 1 puntos

- ☐ All statements are correct
- ☐ h is a strictly increasing function
- ☐ h is neither a strictly increasing function nor a strictly decreasing function.
- ☒ h is a strictly decreasing function

✓ **Correcto**

A function h is called strictly decreasing if whenever $a < b$, then $h(a) > h(b)$

Since the graph of h is a line with negative slope, this is in fact true!

6. Suppose that $f : \mathbb{R} \rightarrow \mathbb{R}$ is a strictly increasing function, with $f(3) = 15$

1 / 1 puntos

Which of the following is a possible value for $f(3.7)$?

- ☐ 14.7
- ☐ 3
- ☒ 17
- ☐ -3

✓ **Correcto**

A function f is called strictly increasing if whenever $a < b$, then $f(a) < f(b)$.

Since $f(3) = 15$ is given and $3 < 3.7$, it must be that $15 < f(3.7)$, and this answer satisfies that.
